New secreted and transmembrane polypeptides useful for treating skin, neurodegenerative diseases, asthma, rheumatoid arthritis, psoriasis a and

Example 42; SEQ ID NO 286; 471pp; English.

The invention discloses isolated PRO secreted/transmembrane polypeptides and the nucleic acid encoding them. The polypeptides can be used to raise antibodies that specifically bind to the PRO polypeptide, for linking a bioactive molecule to a cell expressing a PRO protein and for modulating at least one biological activity of a cell. PRO polypeptides are useful for detecting other PRO polypeptides in a sample and for linking a bioactive molecule to a cell expressing a PRO polypeptide. The PRO polypeptide antibodies are useful for modulating the biological activity of a cell expressing PRO polypeptides. PRO polypeptides are also useful for treating disorders associated with the preservation and maintenance of gastrointestinal mucosa and the repair of acute and chronic mucosal lesions, skin diseases associated with abnormal keratinocyte diseases, lamyotrophic lateral sclerosis (ALS), neuropathies and diseases, anyotrophic lateral sclerosis (ALS), neuropathies and e.g. cancer

> c: employed therapeutically in vivo for lessening the effects of viral cinfection. The PRO polypeptides can be also used in assays to determine c? if it has a role in neurodegenerative diseases or their reversal, as an cantithrombotic agent with reduced risk for haemorrhage as compared with heparin, in treating other PRO-associated disorders, in modulating c? endometrial bleeding angiogenesis, and may also have an effect on kidney tissue. PRO polypeptides and their portions affect the expression of c? genes which have a role in apoptosis. The polynucleotides are useful in character of the second of the character of the second of the character of the collar biology including uses as hybridisation probes for cDNA library to isolate the full-length PRO cDNA or to isolate other cDNAs, in character of the second of the se PRO polypeptides also serves as tumour specific antigens exploited as therapeutic targets for anti-tumour drugs, a employed therapeutically in vivo for lessening the effect effects are viral also

English

The invention relates to an isolated nucleic acid molecule comprising a ceremone with at least 80% identity to: (a) a nucleotide encoding any of cell PRO (secreted and transmembrane protein) polypeptides appearing as CC AB032756-AB032816; or (b) any of 61 nucleotide sequences having 50-4053bp CC fully defined in the specification; or the full length coding sequence of any these 61 nucleotide sequences. Also included are the isolated PRO CC any these 61 nucleotide sequences. Also included are the isolated PRO CC polypeptide (lacking its associated signal peptide or an extracellular CC comprising the vector (used to produce the PRO polypeptide), a chimaeric molecule comprising the PRO polypeptide fixed to a heterologous amino card sequence, an anti-PRO anti-PRO anti-PRO anti-PRO anti-PRO anti-PRO anti-PRO anti-PRO anti-PRO polypeptide fixed to a heterologous amino card sequence, an anti-PRO anti-PRO anti-PRO anti-PRO anti-PRO anti-PRO polypeptide or PRO1865 polypeptides, linking a bioactive molecule to a cell expressing a PRO245 cor PRO1868 polypeptide and modulating at least one biological activity of a cell expressing the PRO245 or PRO1868 polypeptides are useful as pharmaceuticals, diagnostics, biosensors cor bioreactors. These are particularly useful for diagnostics, biosensors cor bioreactors. These are particularly useful for diagnostics, biosensors can care solves, heart attacks, hypertension, gastrointestinal culterations, Parkinson's disease, Alzehmer's disease, or AIDS in the body, and in wound healing or tissue repair. The PRO polypeptides are useful as hybridisation probes, or for screening libraries of human culti-properion and particularly for repair. The PRO polypeptides are useful as hybridisation probes, or for screening libraries of human culti-properion and oligonucleotide (PCR primer or probe) used in the solutation of a PRO cDNA

Novel encoding them, useful for treating abnormating approximation gymecological diseases, skin diseases and secreted and transmembrane PRO polypeptides and polynucleotides ing them, useful for treating abnormal bleeding involved in ological diseases, skin diseases and neurodegenerative diseases.

Example 42; Page 108; 475pp; English.

The invention relates to human PRO polypeptides (secreted and transmembrane polypeptides) and the PRO polypucleotides encoding them. The PRO polypucleotides and polypucleotides can be used in diagnosing or treating abnormal bleeding involved in gynaecological diseases e.g. to avoid or lessen the need for hysterectomy. They can also be used in treating coronary ischaemic conditions, disorders associated with the preservation and maintenance of gastrointestinal mucosa and the repair acute and chronic mucosal lesions, skin diseases associated with abnorm keratinocyte differentiation (e.g. psoriasis), Parkinson's disease, Alzheimer's disease, asthma, rheumatoid arthritis, multiple sclerosis, amyotrophic lateral sclerosis (ALS), neuropathies and diseases related uncontrolled cell growth, such as cancer. This sequence represents a PC product of the invention and controlled to invention as the production of the invention as the presents as the product of the invention as the product of the invention as the presents as productions. I growth, burning PRO cancer. This sequence a polymucleotide of the represents invention abnormal 얁 ç

In particular, these are useful for CC detecting or treating cardiac insufficiency disorders, wounds, cancerous CC tumours, retinal disorders or injuries (e.g. loss of sight due to CC retinitis pigmentosum), obesity, diabetes, hyperinsulinaemia, or bone or cartilage disorders (e.g. sports injuries or CC arthritis) in mammals. PRO polypeptides and their portions affect the CC expression of genes which have a role in cell death. The polynucleotides are useful in molecular biology including uses as hybridisation probes CC are useful in molecular biology including uses as hybridisation probes CC expression, in chromosome and gene mapping, in the generation of antisense RNA CC and DNA, for preparing PRO polypeptides, for generating transgenic CC animals or knockout animals which are useful in the development and CC genetic analysis of individuals with genetic disorders as well as for CC genetic analysis of individuals with genetic disorders as well as for CC genetic analysis of individuals with genetic disorders as well as for CC genetic analysis of individuals with genetic disorders as well as for CC genetic analysis of individuals with genetic disorders as well as for CC genetics as therapeutic agents, for screening compounds to identify those that mimic the PRO polypeptide (agonists) or protein electrophoresis purposes, as therapeutic agents, for screening compounds to identify the PRO genetic delation of PRO antibodies are useful for the PRO polypeptide (antagonists). The polynucleotides and proteins are useful securing and/or assays for PRO e.g. detecting its expression in specific cells, tissues or serum and for affinity contribution of PRO from recombinant cell culture or natural sources. The professional and the control of the PRO genetic description of the professional cell culture or natural sources. The professional cells in the profession of the professional cell culture of a cell call calls.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  The invention discloses isolated PRO secreted/transmembrane polypeptides CC and the nucleic acid encoding them. The polypeptides can be used to raise cantibodies that specifically bind to the PRO polypeptide, for linking a CC bioactive molecule to a cell expressing a PRO protein and for modulating at least one biological activity of a cell. PRO polypeptides are useful cfor detecting other PRO polypeptides in a sample and for linking a CC bioactive molecule to a cell expressing a PRO polypeptide activity of a cell expressing a PRO polypeptide or The PRO CC polypeptide antibodies are useful for modulating the biological activity of a cell expressing PRO polypeptides. The PRO polypeptides or CC polymeuleotides are useful as pharmaceuticals, diagnostics, biosensors or bioreactors. These are useful for stimulating hypertrophy of neonatal cheart, inhibiting vascular endothelial growth factor (VEGF) stimulated T-lymphocytes, enhancing the survival or proliferation of crother action of stimulated T-lymphocytes, enhancing the survival or proliferation and/or receiptor cells, inducing c-fos in endothelial crother action and control or colls activity and control or colls activity or colliferation and/or receiptor cells.
                                                                                                                                                                                                                                                                                                                                                                                                                                                        Best Loc

Example 42; SEQ ID NO 286; 479pp; English.

The invention discloses isolated PRO secreted/transmembrane polypeptides CC and the nucleic acid encoding them. The polypeptides can be used to raise CC antibodies that specifically bind to the PRO polypeptide, for linking a CC bloactive molecule to a cell expressing a PRO protein and for modulating at least one biological activity of a cell. PRO polypeptides are useful CC for detecting other PRO polypeptides in a sample and for linking a bloactive molecule to a cell expressing a PRO polypeptide. The PRO CC polypeptide antibodies are useful for modulating the biological activity of a cell expressing PRO polypeptides. PRO polypeptides are also useful confident to a cell expressing a PRO polypeptide are also useful confident to a cell expressing a property of a cell expressing property of a cell expressing and the repair of acute and chronic mucosal confident to a cell expressing propertides. PRO polypeptides are also useful confident in the property of a cell expression and the repair of acute and chronic mucosal cell esions, skin disease associated with abnormal keratinocyte differentiation (e.g. psoriasis), parkinson's disease, Alzheimer's cellsenses, amyotrophic lateral sclerosis (ALS), neuropathies and cancer. CC proposited as therapeutic targets for uncontrolled cell growth, e.g. cancer. CC proposited as therapeutic targets for anti-tumour drugs, and are also employed therapeutically in vivo for lessening the effects of viral confection. The PRO polypeptides can be also used in assays to determine cell it has a role in neurodegenerative diseases or their reversal, as an anti-thrombotic agent with reduced risk for haemorrhage as compared with heparin, in treating other PRO-associated disorders, in modulating cendometrial bleeding angiogenesis, and may also have an effect on kidney cendometrial bleeding angiogenesis, and may also have an effect on kidney

១១១១១១១១១១១១១១១១១១១១១១១១១១១១១<u>១</u> CC tissue. PRO polypeptides and their portions affect the expression of CC genes which have a role in apoptosis. The polymucleotides are useful in CC molecular biology including uses as hybridisation probes for cDNA library CC to isolate the full-length PRO cDNA or to isolate other cDNAs, in CC chromosome and gene mapping, in the generation of antisense RNA and DNA, Cf for preparing PRO polypeptides, for generating transgenic animals or CC knockout animals which are useful in the development and screening of therapeutically useful reagents, as probes and for the genetic analysis CC individuals with genetic disorders as well as for recombinantly CC expressing the protein and for chromosome identification. The proteins CC therapeutic agents, for screening compounds to identify those that mimic CC the PRO polypeptide (agonists) or prevent the effect of the PRO CC polypeptide (antagonists). The polymucleotides and proteins are useful CC staining and/or assay of sample fluids. Anti-PRO antibodies are useful in CC tissue typing. PRO antibodies are useful for immunohistochemical CC trissue typing. PRO end to the combinant cell culture or natural sources. The PRO genes may also be CC used in gene therapy, particularly for replacing a defective gene. The CC sequence presented is a PCR primer which was used to amplify a PRO CC polymucleotide of the invention.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        The invention relates to human PRO polypeptides and the polynucleotides CC encoding them. The polypeptides and polynucleotides are used for treating CC diseases related to growth or survival of nerve cells such as Parkinson's CC disease, Alzheimer's disease, amyotrophic lateral sclerosis (ALS) and CC cancer, viral infections, Usher's syndrome, haemorrhage, enterocolitis, CC collinger-Ellison syndrome, gastrointestinal ulceration, congenital CC microvillus strophy, skin diseases such as psoriasis and epithelial CC cancers, endometrial bleeding, angiogenesis, ischaemic conditions, CC asthma, rheumatoid arthritis, multiple sclerosis, inflammatory diseases, CC atherosclerosis, cardiac injury, infertility, birth defects, premature CC athorosclerosis, stroke and diabetic complications. The polymucleotides are CC also useful in chromosome and gene mapping. This sequence represents a CC primer used in isolation of a human PRO polymucleotide of the
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Query Match

The Miller of Control

```
The invention discloses isolated PRO secreted/transmembrane polypeptides can the nucleic acid encoding them. The polypeptides can be used to raise controlled to the PRO polypeptide, for linking a combinative molecule to a cell expressing a PRO protein and for modulating controlled to a cell expressing a PRO polypeptides are useful controlled to a cell expressing a PRO polypeptide. The PRO polypeptide and for including the biological activity of a cell. PRO polypeptide. The PRO polypeptide are useful for modulating the biological activity of a cell expressing a PRO polypeptide. The PRO polypeptide. The PRO polypeptide are also useful controlled cell expressing PRO polypeptides are also useful controlled cell expressing PRO polypeptides. The PRO polypeptide are also useful controlled cell expressing PRO polypeptides are also useful controlled cell expressing PRO polypeptides are also useful controlled cell growth, e.g. cancer. Controlled cell growth, e.g. cancer. Controlled cell growth, e.g. cancer. Controlled as therapeutical privates for anti-tumour drugs, and are also captured therapeutically in vivo for lessening the effects of viral confection. The PRO polypeptides can be also useful assays to determine cell fit has a role in neurodegenerative diseases or their reversal, as an antithrombotic agent with reduced risk for haemorrhage as compared with the partin, in treating other PRO-associated disorders, in modulating controlled cell are which have a role in apoptosis. The polymucleotides are useful in controlled cell as the effect on kidney tissue. PRO polypeptides and their portions affect the expression of controlled cell as an another controlled cell as the effect on kidney the polymucleotides are useful in the development and series and DNA, controlled cell as for combinantly of therapeutically useful respents, as probes and for the genetic analysis of individuals with genetic disorders as well as for recombinantly centred in analysis of individuals with genetic disorders as well as for recombinantly cent

The polymucleotides and proteins are useful for tissue typing. PRO antibodies are useful for insurance the proteins are useful ataining and/or assay of sample fluids. Anti-PRO antibodies are useful in diagnostic assays for PRO e.g. detecting its expression in specific cells, tissues or serum and for affinity purification of PRO from recombinant cell culture or natural sources. The PRO genes may also be used in gene therapy, particularly for replacing a defective gene. The sequence presented is a PCR primer which was used to amplify a PRO polymucleotide of the invention.

The invention discloses isolated PRO secreted/transmembrane polypeptides and the nucleic acid encoding them. The polypeptides can be used to raise antibodies that specifically bind to the PRO polypeptide, for linking a bioactive molecule to a cell expressing a PRO polypeptide are useful for detecting other PRO polypeptides in a sample and for linking a bioactive molecule to a cell expressing a PRO polypeptides are useful for modulating the biological activity of a cell. PRO polypeptides are useful for treating disorders associated with the preservation and maintenance of gastroinfesting PRO polypeptides in a sample and for linking a bioactive molecule to a cell expressing a PRO polypeptides are also useful for treating disorders associated with the preservation and maintenance of gastroinfesting properties as the polypeptides are also useful for treating object of a cell properties and chronic mucosal differentiation. The prophic lateral sclerosis (ALS), neuropathies and cancer additionally, disease related to uncontrolled cell growth, e.g. cancer differential propeptides can be also used in assays to determine the fifth of the prophypeptides can be also used in assays to determine the fifth of the prophypeptides can be also used in assays to determine the fifth has a role in neurodegenerative disease or their reversal, as an antithrombotic agent with reduced risk for hemotrage as compared with haparin, in treating other propession of their prophypeptides can be also served as the contract of the prophypeptides and their portions affect the expression of compared with haparin, in treating other prophyperides. The polymuclectides are useful in the generation of antisense RNA and DNA, chromosome and gene mapping, in the generation of antisense RNA and DNA, chromosome and gene mapping, in the generation of antisense RNA and DNA, chromosome and gene mapping in the prophyperides other conna. In DNA conceptual properties as well as for recenting of the prophyperides as useful in the development and screening of the p

New PRO polypeptides useful for treating Parkinson's disease, enterocolitis, Zollinger-Ellison syndrome gastrointestinal ulceration, Alzheimer's disease, amyotrophic lateral sclerosis and Usher syndrome.

SEQ ID NO 286; 468pp; English.

The invention discloses isolated PRO secreted/transmembrane polypeptides and the nucleic acid encoding them. The polypeptides can be used to raise antibodies that specifically bind to the PRO polypeptide, for linking a bioactive molecule to a cell expressing a PRO protein and for modulating at least one biological activity of a cell. PRO polypeptides are useful for detecting other PRO polypeptides in a sample and for linking a bioactive molecule to a cell expressing a PRO polypeptide. The PRO polypeptide are useful for cell expressing a PRO polypeptide. The PRO polypeptide are useful for treating disorders associated with the preservation and maintenance of gastrointestinal mucosa and the repair of acute and chronic mucosal abnormal raise

> CC diseases, amyotrophic lateral sclerosis (ALS), neuropathies and diseases, amyotrophic lateral sclerosis (ALS), neuropathies and cadditionally, disease related to uncontrolled cell growth, e.g. cancer. CC PRO polypeptides also serves as tumour specific antigens which may be cemployed therapeutic targets for anti-tumour drugs, and are also cemployed therapeutically in vivo for lateral theory of viral cemployed therapeutically in vivo for lateral controlled sequence presented nted is a PCR primer which was used of the invention. to amplify a

Anti-PRO antibodies are useful diagnostic assays for PRO e.g. detecting its expression in specific cells, tissues or serum and for affinity purification of PRO from recombinant cell culture or natural sources. The PRO genes may also be used in gene therapy, particularly for replacing a defective gene. The sequence presented is a PCR primer which was used to amplify a PRO polynucleotide of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                              17-SEP-1997;

and the nucleic acid encoding them. The polypeptides can be used to raise antibodies that specifically bind to the PRO polypeptide, for linking a bloactive molecule to a cell expressing a PRO polypeptide, for linking a bloactive molecule to a cell expressing a PRO polypeptide are useful for detecting other PRO polypeptides in a sample and for linking a coll system of a cell expressing a PRO polypeptides are useful for modulating the biological activity of a cell. PRO polypeptides are useful for modulating the biological activity of a cell expressing a PRO polypeptides are also useful for treating disorders associated with the preservation and maintenance of gastrointestinal mucosa and the repair of acute and chronic mucosal lesions, skin diseases associated with abnormal keratinocyte of diseases, amyotrophic lateral sclerosis (ALS), neuropathies and captured additionally, disease related to uncontrolled cell growth, e.g. cancer. RRO polypeptides also serves as tumour specific antigens which may be employed therapeutically in vivo for lessening the effects of viral infection. The PRO polypeptides can be also used in assays to determine the first of the properties and their portions affect the expression of tissue. PRO polypeptides and their portions affect the expression of the properties, and may also have an effect on kdney tissue. PRO polypeptides and their portions affect the expression of compared with reduced risk for hemorrhage as compared with constant biology including uses as hybridisation probes for cona. I hirrary to isolate the full-length PRO cDNA or to isolate other cDNAs, in concentral biology including uses as hybridisation probes for cDNAs, in concentral biology including uses as hybridisation probes for cDNAs, in the generation of antisense RNA and DNA. Chromosome and gene mapping, in the generation of antisense RNA and DNA. Chromosome and gene mapping, in the development and screening of therapeutic ally useful respectively. The polymentes are useful for tissue typing. PRO antibodies are usef

The invention relates to human PRO polypeptides (secreted and transmembrane polypeptides) and the polypurcleotides encoding them. The polypeptides are useful for detecting PRO polypeptides and for linking a bioactive molecule to a cell expressing the polypeptides, where the bioactive molecule is a toxin, radiolabel or an antibody. The bioactive material causes the death of the cell. The polypeptides or antibodies specific to the polypeptides are useful for modulating at least one biological activity of a cell expressing the polypeptides. The biological activity of a cell expressing the polypeptides. The biological activity of a cell expressing the polypeptides. The bolypeptides are useful for treating disorders associated with leukocyte homing such as asthma, rheumatoid arthritis, psoriasts and multiple sclerosis, repair of acute and chronic mucosal lesions such as enterocolitis and 2011.nger Ellison syndrome and for identifying agonists or antisgonists of the polypeptides. The polymucleotides are useful as hybridization probes, in chromosome and gene mapping, in generation of antisense RNA and DNA, in the preparation of PCR), Northern analysis, Southern analysis and western analysis. This sequence represents a PCR primer used in isolation of a human PRO polymucleotide of the invention
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Ashkenazi A, Botstein I

```

New isolated secreted and transmembrane polypeptide, useful for treating diseases, e.g. Parkinson's disease, Alzheimer's disease, amyotrophic lateral sclerosis, cancer, neuropathies, diabetes and psoriasis.

invention discloses isolated PRO secreted/transmembrane polypeptides the nucleic acid encoding them. The polypeptides can be used to rais

raise

Example 42;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            CC of a cell expressing PRO polypeptides. PRO polypeptides are also useful cor treating disorders associated with the preservation and maintenance of gastrointestinal mucoss and the repair of scute and chronic mucosal cellsions, skin diseases associated with abnormal keratinocyte differentiation (e.g. psoriasis), parkinson's disease, Alzheimer's cellsieses, amyotrophic lateral sclerosis (ALS), neuropathies and cancer. Cellsions, the properties also serves as tumour specific antigens which may be exploited as therapeutic targets for anti-tumour drugs, and are also employed therapeutically in vivo for lessenhing the effects of viral infection. The PRO polypeptides can be also used in assays to determine cell infection. The PRO polypeptides can be also used in assays to determine cell infection. The PRO polypeptides and their portions affect the expression of tissue. PRO polypeptides and their portions affect the expression of cellsius. PRO polypeptides and their portions affect the expression of cellsius. PRO polypeptides and their portions affect the expression of cellsius. PRO polypeptides for generating transgenic animals or compared with the compared with the full-length PRO cDNA or to isolate other cDNAs, in cellsius proposes and gene mapping, in the generation of antisense RNAs and DNA, cellsius proposed for propertically useful respents, for generating transgenic animals or characteric analysis or findividuals with genetic disorders as well as for recombinantly of individuals with genetic disorders as well as for recombinantly cellsius. PRO antibodies are useful for infection. The process and cellsius and/or assay of sample fluids. Anti-PRO antibodies are useful in cell corposition of sample fluids. Anti-PRO antibodies are useful in genetic cells in genetic of the PRO cells and propertice assays for PRO e.g. detecting its expression in specific cells, interested is a PCR primar which was used to amplify a PRO cellsynucleotide of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Query Match

PRO polypeptides are useful for detecting other PRO polypeptides in a sample and for linking a bioactive molecule to a cell expressing a PRO polypeptide. The PRO polypeptide antibodies are useful for modulating the biological activity of a cell expressing PRO polypeptides. PRO polypeptides.

cytostatic; virucide; anticoagulant.
The invention discloses isolated PRO secreted/transmembrane polypeptides CC and the nucleic acid encoding them. The polypeptides can be used to raise CC antibodies that specifically bind to the PRO polypeptide, for linking a CC bloactive molecule to a cell expressing a PRO protein and for modulating CC at least one biological activity of a cell. PRO polypeptides are useful for detecting other PRO polypeptides in a sample and for inking a CC polypeptide antibodies are useful for modulating the biological activity of a cell. PRO polypeptide. The PRO CC polypeptides are useful for modulating the biological activity of a cell expressing a PRO polypeptide. The PRO CC polypeptides are also useful for treating disorders associated with the preservation and maintenance of gastrointestinal mucosa and the repair of acute and chronic mucosal cell esions, skin diseases associated with abnormal keratinocyte consease, amyotrophic lateral sclerosis (ALS), neuropathies and cancer. CC diseases, amyotrophic lateral sclerosis (ALS), neuropathies and cancer. PRO polypeptides also serves as tumour specific antigens which may be exploited as therapeutic targets for anti-tumour drugs, and are also cemployed therapeutically in vivo for lessening the effects of viral confection. The PRO polypeptides can be also used in assays to determine ce if it has a role in neurodegenerative diseases or their reversal, as an confection and problems are compared with heparin, in treating other PRO-associated disorders, in modulating cell endometrial bleeding angiogenesis, and may also have an effect on kidney tissue. PRO polypeptides and their portions affect the expression of cell endometrial problems are useful in molecular biology including uses as hybridisation probes for cDNA, in to isolate the full-length PRO cDNA or to isolate other cDNAs, in

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         CC chromosome and gene mapping, in the generation of antisense RNA and DNA, CC for preparing PRO polypeptides, for generating transgenic animals or CC knockout animals which are useful in the development and screening of CC therapeutically useful reagents, as probes and for the genetic analysis CC of individuals with genetic disorders as well as for recombinantly CC expressing the protein and for chromosome identification. The proteins CC are useful as molecular marker for protein electrophoresis purposes, as CC therapeutic agents, for screening compounds to identify those that mimic CC the PRO polypeptide (agonists) or provent the effect of the PRO CC polypeptide (antagonists). The polyuncleotides and proteins are useful CC for tissue typing. PRO antibodies are useful for immunohistochemical CC tissue typing. PRO antibodies are useful for immunohistochemical CC tissue typing. PRO antibodies are useful for staining and/or assay of sample fluids. Anti-PRO antibodies are useful in CC clasmostic assays for PRO e.g. detecting its expression in specific CC cells, tissues or serum and for affinity purification of PRO from CC recombinant cell culture or natural sources. The PRO genes may also be CC used in gene therapy, particularly for replacing a defective gene. The CC sequence presented is a PCR priner which was used to amplify a PRO CC polynucleotide of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Query Match

can the invention discloses isolated PRO secreted/transmembrane polypeptides and the mucleic acid encoding them. The polypeptides can be used to raise antibodies that specifically bind to the PRO polypeptides for linking a bioactive molecule to a cell expressing a PRO protein and for modulating can be discretive molecule to a cell expressing a PRO polypeptides are useful for detecting other PRO polypeptides. The PRO polypeptides are useful for a sample and for inhiking a cell expressing a PRO protein and for modulating complyment to the protein and for the protein and for the protein complyment to the protein of complyment complyment to the protein complyment complyment complyment to the protein complyment to the protein complyment complyment to the protein complyment com

Novel secreted and transmembrane polypeptides and polynucleotides encoding them useful for treating skin, neurodegenerative diseases, antithrombotic agent and for inducing endothelial cell apoptosis.

Example 42; SEQ Ħ ĕ 286; 477pp; English.

The invention discloses isolated PRO secreted/transmembrane polypeptides and the nucleic acid encoding them. The polypeptides can be used to raise antibodies that specifically bind to the PRO polypeptide, for linking a bioactive molecule to a cell expressing a PRO protein and for modulating at least one biological activity of a cell. PRO polypeptides are useful for detecting other PRO polypeptides in a sample and for linking a raise

> CC polypeptide antibodies are useful for modulating the biological activity CC of a cell expressing RRO polypeptides. The PRO polypeptides or CC polymucleotides are useful as pharmaceuticals, diagnostics, biosensors or CC bioreactors. These are useful for stimulating the biological activity CC polymucleotides are useful as pharmaceuticals, diagnostics, biosensors or CC bioreactors. These are useful for stimulating hypertrophy of meonatal CC part inhibiting vascular endothelial growth factor (VEGP)-stimulated CC proliferation of endothelial cells, modulating the proliferation of CC estimulated Tlymphocytes, enhancing the survival or proliferation of CC eslis, modulating glucose or FRA uptake, inducing c-fos in endothelial CC cells, modulating glucose or FRA uptake, inducing proliferation and/or rectinitis providents on the provides of sight due to retinitis pigentosum), obesity, diabetes, hyperinsulinaemia, cancerous CC tunours, retinal disorders or injuries (e.g. loss of sight due to retinitis pigentosum), obesity, diabetes, hyperinsulinaemia, or bone or carrilage disorders (e.g. sports injuries or carrilage disorders (e.g. sports injuries or carrilage in cell death. The polymucleotides care useful in molecular biology including uses as hybridisation probes of or combinatory to isolate the full-length PRO CDNA or to isolate other CC animals or knockout enimals which are useful in the development and screening of therapeutically useful reagents, as probes and for the generating the protein and for chromosome identification. CC mimals are useful as molecular marker for probes descreening compounds to identify the proteins are useful in the development and cc the PRO polypeptide (antagonists). The polymucleotides and proteins are useful in diagnostic assays for PRO e.g. detecting its captures on in specific cells, tissues or serum and for affinity for replacing a sueful in gene therapy partitually for replacing a sueful in gene therapy partituals of proteins. The polyment cell culture or natural sources. The purif genes may also be used in gene therapy, particularly for ective gene. The sequence presented is a PCR primer which lify a PRO polynucleotide of the invention. replacing a was used to

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    those that mimic the PRO polypeptide (agonists) or prevent the effect of the PRO polypeptide (antagonists). The polynucleotides and proteins are useful for tissue typing. PRO antibodies are useful for immunchistochemical staining and/or assay of sample fluids. Anti-PRO antibodies are useful in diagnostic assays for PRO e.g. detecting its expression in specific cells, tissues or serum and for affinity purification of PRO from recombinant cell culture or natural sources. The PRO genes may also be used in gene therapy, particularly for replacing a defective gene. The sequence presented is a PCR primer which was used to amplify a PRO polynucleotide of the invention.
                                                                                                                                                                                                                                                                           17-SEP-1997;

                                                                                                                                                                                                                                                                                                                                                                                                               The invention discloses isolated PRO secreted/transmembrane polypeptides and the mucleic acid encoding them. The polypeptides can be used to raise antibodies that specifically bind to the PRO polypeptide, for linking a bioactive molecule to a cell expressing a PRO polypeptide. The PRO polypeptides are useful for detecting other PRO polypeptides in a sample and for including a coll expressing a PRO polypeptide. The PRO polypeptides are useful for modulating the biological activity of a cell expressing a PRO polypeptides. The PRO polypeptides are useful for stimulating the biological activity of a cell expressing a PRO polypeptides are useful for polypeptides. The PRO polypeptides are useful for stimulating the biological activity of a cell expressing a PRO polypeptides or polymoptides are useful for stimulating the proliferation of choracter. These are useful for stimulating the proliferation of choracter inhibiting vascular endothelial growth factor (VREF)-stimulated proliferation of choracters, provided provides are useful for cells, modulating glucose or PRA uptake, inducing c-fos in endothelial cells, modulating glucose or PRA uptake, inducing proliferation and/or receils, modulating glucose or PRA uptake, inducing proliferation of cells, modulating cardiac insufficiency disorders, wounds, cancerous tumours, retinal disorders or injuries (e.g. loss of sight due to creating the promethial provides and the proliferation of certinal near particular, these are useful for cells, inducing or transpentic proliferation of probes are useful in molecular biology including uses as hybridisation probes or cartilage disorders (e.g. sports injuries or creating the prolectides and their portions affect the expression of genes which have a role in cell death. The polymucleotides are useful in molecular biology including uses as hybridisation of antisense RNA and DNA, for preparing PRO polypeptides, for generating transgenic cannals or knockout animals which are useful in the development and corrected and protest and correct
                                                                                                                                                                                                                                                                                     Query Match

Novel secreted and transmembrane polypeptides and polynucleotides encoding them useful for treating cancers, asthma, rheumatoid arthritis, neurological diseases, and skin diseases.

Example 42; SEQ ID NO 286; 478pp; English.

The invention discloses isolated PRO secreted/transmembrane polypeptides and the nucleic acid encoding them. The polypeptides can be used to raise antibodies that specifically bind to the PRO polypeptide, for linking a bloactive molecule to a cell expressing a PRO protein and for modulating at least one biological activity of a cell. PRO polypeptides are useful for detecting other PRO polypeptides in a sample and for linking a bloactive molecule to a cell expressing a PRO polypeptide. The PRO polypeptide antibodies are useful for modulating the biological activity of a cell expressing a PRO polypeptides or polypeptide are useful as pharmaceuticals, diagnostics, biosensors or bioreactors. These are useful for stimulating hypertrophy of neonatal heart, inhibiting vascular endothella growth factor (VEGP)-stimulated heart, inhibiting vascula proliferation of endothel stimulated T-lymphocytes, endothelial cells, modulating the proliferation of the survival or proliferation o

tumours, retinal disorders or injuries (e.g. loss of sight due to Cretinitis pigmentosum), obesity, diabetes, hyperinsulinaemia, retinitis pigmentosum), obesity, diabetes, hyperinsulinaemia, cor bone or cartilage disorders (e.g. sports injuries or chypoinsulinaemia, or bone or cartilage disorders (e.g. sports injuries or cor arthritis) in mammals. PRO polypeptides and their portions affect the care useful in molecular biology including uses as hybridisation probes cor coronal library to isolate the full-length PRO cDNA or to isolate other coronal not come and gene mapping, in the generation of antisense RNA cand DNA, for preparing PRO polypeptides, for generating transgenic canimals or knockout animals which are useful in the development and correcening of therapeutically useful reagents, as probes and for the genetic analysis of individuals with genetic disorders as well as for recombinantly expressing the protein and for chromosome identification. The proteins are useful as molecular marker for protein electrophoresis purposes, as therapeutic agents, for screening compounds to identify those that mimic the PRO polypeptide (agonists) or prevent the effect of the PRO polypeptide (antagonists). The polynucleotides and proteins are useful for tissue typing. PRO antibodies are useful for antibodies are useful in diagnostic assays for PRO eg. detecting its expression in specific cells, tissues or serum and for affinity represented and recombinant cell culture or natural sources. The polyperion of the protein recombinant cell culture or natural sources. The
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 cells, modulating glucose or FFA uptake, inducing proliferation and/or -differentiation of chondrocytes. In particular, these are useful for detecting or treating cardiac insufficiency disorders, wounds, cancerou tumours, retinal disorders or injuries (e.g. loss of sight due to retinitis pigmentosum), obesity, diabetes, hyperinsulinaemia,
PRO genes may also be used in gene therapy, particularly for replacing defective gene. The sequence presented is a PCR primer which was used amplify a PRO polynucleotide of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                retinal neurons or rod photoreceptor cells, inducing c-fos in endothelial

CC antiboties that specifically bind to the PRO polypeptides can be used to raise community and the nucleic acid encoding them. The polypeptide, for linking a bloattive molecule to a cell expressing a PRO polypeptide. For linking a close the test one biological activity of a cell. PRO polypeptide and for modulating the bloatchive molecule to a cell expressing a PRO polypeptide. The PRO colleged and for linking a choice of a cell expressing a PRO polypeptide and for linking a bloatchive molecule to a cell expressing a PRO polypeptide. The PRO colleged and for linking a choice of a cell expressing PRO polypeptides or colleged and for linking a particular properties bloagical activity of a cell expressing PRO polypeptides. The PRO polypeptides or colleged are useful for stimulating the biological activity of a cell expressing PRO polypeptides. The PRO polypeptides or colleged are useful for stimulating hypertrophy of mechanic colleged proliferation of chodothelial growth factor (MEGP) stimulated proliferation of chodothelial cells, modulating the proliferation of chodothelial cells, modulating the proliferation of cells, modulating proliferation of colleged proliferation of chodothelial cells, inducing cross in endothelial cells, modularing the proliferation and/or recells, modulating proliferation of colleged proliferation of chodothelial cells, inducing cross in endothelial cells, modularing the proliferation of cells, inducing cross in endothelial cells, modularing the proliferation of antisense received the cells, modularing the protein and their portions affect the expression of genes which have a role in cell death. The polymucleotides are useful as molecular biology including uses as hybridisation probes of command the protein are believed by the proliferation of individuals with generation death of the protein are cells in the development and cells are

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          밁
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Ś
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  RESULT 1482
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   CC detecting or treating cardiac insufficiency disorders, wounds, cancerous CC tumours, retinal disorders or injuries (e.g. loss of sight due to Cr ethilitis pigmentosum), obesity, diabetes, hyperinsulinaemia, or bone or cartilage disorders (e.g. sports injuries or CC hypoinsulinaemia, or bone or cartilage disorders (e.g. sports injuries or CC arthritis) in mammals. PRO polypeptides and their portions affect the CC expression of genes which have a role in cell death. The polynucleotides CC are useful in molecular biology including uses as hybridisation probes CC are useful in the convenience and gene mapping, in the generation of antisense RNA CC and DNA, for preparing PRO polypeptides, for generating transgenic CC animals or knockout animals which are useful in the development and CC screening of therapeutically useful reagents, as probes and for the genetic analysis of individuals with genetic disorders as well as for CC genetic analysis of individuals with genetic disorders as well as for CC inmunity expressing the protein and for chromosome identification. CC The proteins are useful as molecular marker for protein electrophoresis purposes, as therapeutic agents, for screening compounds to identify CC those that minic the PRO polypeptide (agonists) or prevent the effect of the PRO polypeptide (antagonists). The polynucleotides and proteins are useful for tissue typing. PRO antibodies are useful for CC useful for tissue typing. PRO antibodies are useful for CC useful for research in diagnostic assays for PRO e.g. detecting its CC expression in specific cells, tissues or serum and for affinity CC antibodies are useful of gene therapy, particularly for replacing a CC defective gene. The sequence presented is a PCR primer which was used to applify a PRO polynucleotide of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               The invention discloses isolated PRO secreted/transmembrane polypeptides CC and the nucleic acid encoding them. The polypeptides can be used to raise CC antibodies that specifically bind to the PRO polypeptide, for linking a CC bioactive molecule to a cell expressing a PRO protein and for modulating CC at least one biological activity of a cell. PRO polypeptides are useful CC for detecting other PRO polypeptides in a sample and for linking a CC bioactive molecule to a cell expressing a PRO polypeptide. The PRO CC polypeptide antibodies are useful for modulating the biological activity CC of a cell expressing PRO polypeptides or CC polynucleotides are useful for modulating the biological activity CC of a cell expressing PRO polypeptides or CC polynucleotides are useful as pharmaceuticals, diagnostics, biosensors or CC polynucleotides are useful for stimulating hypertrophy of neonatal CC theart, inhibiting vascular endothelial growth factor (VEGP)-stimulated CC proliferation of endothelial cells, modulating the proliferation of CC stimulated T-lymphocytes, enhancing the survival or proliferation of CC cells, modulating glucose or FFA uptake, inducing proliferation and/or redifferentiation of chondrocytes. In particular, these are useful for CC detection or treating cardiac causes in surficiency disorders woulds cancernal.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Query Match

Novel PRO polypeptides useful for treating Parkinson's disease, Alzheimer's disease, enterocolitis, Zollinger-Ellison syndrome, psoriasis, epidermoid carcinoma of the vulva and gliomas, gynecological diseases.

Example 42; SEQ ID NO 286; 473pp; English.

The invention discloses isolated PRO secreted/transmembrane polypeptides CC and the nucleic acid encoding them. The polypeptides can be used to raise CC antibodies that specifically bind to the PRO polypeptide, for linking a CC bloactive molecule to a cell expressing a PRO protein and for modulating CC at least one biological activity of a cell. PRO polypeptides are useful CC for detecting other PRO polypeptides in a sample and for linking a CC bloactive molecule to a cell expressing a PRO polypeptides. The PRO CC polypeptide antibodies are useful for modulating the biological activity of a cell expressing PRO polypeptides. The PRO CC polypucleotides are useful as pharmaceuticals, diagnostics, biosensors or CC polypucleotides are useful for stimulating hypertrophy of neonatal CC heart, inhibiting vascular endothelial growth factor (VEGP)-stimulated CC proliferation of endothelial cells, modulating the proliferation of cells, inducing the proliferation of cells, modulating cells, modulating proliferation of cells, inducing proliferation endothelial cells, modulating proliferation and/or receifferentiation of chondrocytes. In particular, these are useful for CC ediferential disorders or injuries (e.g. loss of sight due to cretinitis pigmentosum), obesity, diabetes, hyperinsulinaemia, cancerous ctimulates injuries or cartilage disorders (e.g. sports injuries or cartilage diso

                                                     CC CDNAS, in chromosome and gene mapping, in the generation of antisense RNA CC and DNA, for preparing PRO polypeptides, for generation of antisense RNA CC animals or knockout animals which are useful in the development and CC screening of therapeutically useful reagents, as probes and for the genetic analysis of individuals with generatid disorders as well as for crecembinantly expressing the protein and for chromosome identification. CC The proteins are useful as molecular marker for protein electrophoresis purposes, as therapeutic agents, for screening compounds to identify ct those that mimic the PRO polypeptide (agonists) or prevent the effect of the PRO polypeptide (antagonists). The polynucleotides and proteins are useful for tissue typing. PRO antibodies are useful for dimunchistochemical staining and/or assays for PRO e.g. detecting its cxpression in specific cells, tissues or serum and for affinity proteins are useful in diagnostic assays for PRO e.g. detecting its cxpression in specific cells, tissues or serum and for affinity proteins are useful ended to the protein assays for PRO e.g. detecting its capress may also be used in gene therapy, particularly for replacing a cdefective gene. The sequence presented is a PCR primer which was used to camplify a PRO polynucleotide of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   arthritis) in mammals. PRO polypeptides and their portions affect the expression of genes which have a role in cell death. The polynucleotides expression for genes which have a role in gels as hybridisation probes are useful in molecular biology including uses as hybridisation probes for cDNA library to isolate the full-length PRO cDNA or to isolate other.

Novel isolated PRO polypeptide useful for treating Parkinson's disease, enterocolitis, Zollinger-Ellison syndrome, gastrointestinal ulceration, Alzheimer's disease, amyotrophic lateral sclerosis.

Example SEQ ID NO 286; 478pp; English

The invention discloses isolated PRO secreted/transmembrane polypeptides and the nucleic acid encoding them. The polypeptides can be used to raise antibodies that specifically bind to the PRO polypeptide, for linking a bioactive molecule to a cell expressing a PRO protein and for modulating care to react one biological activity of a cell. PRO polypeptide and for inking a conference of the protein and for modulating care to react one biological activity of a cell. PRO polypeptide and for linking a proper protein and for modulating care useful for modulating the biological activity of a cell expressing a PRO polypeptide are useful for polymeptides or coll mark inhibiting vascular endothelial for modulating the biological activity of a cell expressing a PRO polypeptide activity of a cell expression of polypeptides are useful for collar inhibiting vascular endothelial growth factor (VESP) stimulated proliferation of chondroutytes. In particular, these are useful for cells, modulating glucose or PRA uptake, inducing c-fos in endothelial cells, modulating proliferation and/or recells, modulating glucose or PRA uptake, inducing proliferation and/or recells, modulating proliferation and/or recells, modulating proliferation and/or recells, modulating proliferation of chondroutytes. In particular, these are useful for cells, inducing c-fos in endothelial cells, modulating proliferation of cells, inducing c-fos in endothelial cells, modulating proliferation and/or recells, modulating proliferation of cells in particular, these are useful for cells, inducing c-fos in endothelial cells, inducing c-fos in en

PRO polypeptides and their portions affect the expression of genes which have a role in cell death. The polymucleotides are useful in molecular biology including uses as hybridisation probes crown in chromosome and gene mapping, in the generation of antisense RNA crowns, in chromosome and gene mapping, in the generation of antisense RNA crowns and DNA, for preparing PRO polypeptides, for generation of antisense RNA crowns of therapeutically useful reagents, as probes and for the genetic analysis of individuals with genetic disorders as well as for creombinantly expressing the protein and for chromosome identification. The proteins are useful as molecular marker for protein electrophoresis purposes, as therapeutic agents, for screening compounds to identify the PRO polypeptide (antagonists). The polymucleotides and proteins are cuseful for tissue typing. PRO antibodies are useful for communohistochemical staining and/or assay of sample fluids. Anti-PRO crownession in specific cells, tissues or serum and for affinity compression in specific cells, tissues or serum and for affinity and defective gene. The sequence presented is a PCR primer which was used to compilify a PRO polymucleotide of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   antibodies that specifically bind to the PRO polypeptide, for linking a bloactive molecule to a cell expressing a PRO protein and for modulating at least one biological activity of a cell. PRO polypeptides are useful for detecting other PRO polypeptides in a sample and for linking a bloactive molecule to a cell expressing a PRO polypeptide. The PRO polypeptide antibodies are useful for modulating the biological activity of a cell expressing PRO polypeptides. The PRO polypeptides or cell expressing a PRO polypeptides or polypeptides or polypeptides or polypeptides or cell expressing PRO polypeptides. The PRO polypeptides or polypeptides. The PRO polypeptides or polypeptides. The PRO polypeptides or polypeptide

## 2003-743809/70

Novel isolated secreted and transmembrane PRO polypeptides e.g. PRO245 and PRO1868, useful for treating e.g. Parkinson's disease, Alzheimer's disease, amyotropic lateral sclerosis, cancer, neuropathies, diabetes a and

Example 42; SEQ ID NO 286; 473pp; English

The invention discloses isolated PRO secreted/transmembrane polypeptides CC and the nucleic acid encoding them. The polypeptides can be used to raise CC antibodies that specifically bind to the PRO polypeptide, for linking a CC bioactive molecule to a cell expressing a PRO protein and for modulating CC at least one biological activity of a cell. PRO polypeptides are useful CC for detecting other PRO polypeptides in a sample and for linking a CC bioactive molecule to a cell expressing a PRO polypeptides or linking a CC polypucleotides are useful for modulating the biological activity CC of a cell expressing PRO polypeptides. The PRO CC polypucleotides are useful as pharmaceuticals, diagnostics, biosensors or CC polypucleotides are useful for stimulating hypertrophy of neonatal CC heart, inhibiting vascular endothelial growth factor (VEGP)-stimulated CC proliferation of endothelial cells, modulating the proliferation of cells, modulating the proliferation and/or redetecting or treating cardiac insufficiency disorders, wounds, cancerous cutwours, retinal disorders or injuries (e.g. loss of sight due to certifies) in mammals. PRO polypeptides and their portions affect the companion of genes which have a role in cell death. The polymucleotides are useful in molecular biology including uses as hybridisation probes constant in the centers or injuries or a procession of genes which have a role in cell death. The polymucleotides are useful insulate the full-length PRO CDNA or to isolate other consumers and gene manyoing. In the generation of antisense RNA DNA, in chromosome and gene mapping, in the generation of antisense RNA A, for preparing PRO polypeptides, for generating transgenic s or knockout animals which are useful in the development and

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              8
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  និនិនិនិនិនិនិនិនិនិនិនិនិនិនិនិ
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 CC genetic analysis of individuals with genetic disorders as well as for the crecombinantly expressing the protein and for chromosome identification. CC The proteins are useful as molecular marker for protein electrophoresis comproses, as therapeutic agents, for screening compounds to identify cthose that mimic the PRO polypeptide (agonists) or prevent the effect of the PRO polypeptide (antagonists). The polynucleotides and proteins are cuseful for tissue typing. PRO antibodies are useful for climinosistochemical staining and/or assay of sample fluids. Anti-PRO cantibodies are useful in diagnostic assays for PRO eg. detecting its carpression in specific cells, tissues or serum and for affinity comprises on the protein of PRO from recombinant cell culture or natural sources. The prification of PRO from recombinant cell culture or natural sources. The compress may also be used in gene therapy, particularly for replacing a complify a PRO polynucleotide of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Matches

New secreted transmembrane PRO polypeptides and nucleic acids encoding the polypeptides, useful in gene therapy, in identifying chromosomes, chromosome markers, in generating probes and in tissue typing. as

Example 42; SEQ ID NO 286; 487pp; English.

The invention discloses isolated PRO secreted/transmembrane polypeptides and the nuclaic acid encoding them. The polypeptides can be used to raise antibodies that specifically bind to the PRO polypeptides for linking a bioactive molecule to a cell expressing a PRO polypeptides or detecting other PRO polypeptides in a sample and for modulating to detective molecule to a cell expressing a PRO polypeptides are useful for detections are useful for stimulating the biological activity of a cell expressing a PRO polypeptides are useful for modulating the biological activity of a cell expressing a PRO polypeptides are useful for modulating the biological activity of a cell expressing PRO polypeptides. The PRO polypeptides or polynucleotides are useful for stimulating hypertrophy of neonatal cheart, inhibiting vascular endothelial growth factor (VEGP)-stimulated proliferation of endothelial cells, modulating the proliferation of cells, modulating proliferation of retinal neurons or rod photoreceptor cells, inducing c-fos in endothelial cells, modulating proliferation of cells, modulating proliferation of cells, modulating proliferation of cells, modulating proliferation of cells, properties are useful for cells, modulating cardiac insufficiency disorders, wounds, cancerous tumours, retinal disorders or injuries (e.g. loss of sight due to retinating prometosum), obesity, diabetes, hyperinsulinaemia, certination of genes which have a role in cell death. The polynucleotides are useful in molecular biology including uses as hyporidisation probes are useful in molecular biology including uses as hyporidisation probes are useful in molecular biology including uses as hyporidisation of antisense RNA in chromosome and gene mapping, in the generating transgenic cannals or knockout animals which are useful in the development and correct malysis of individuals with genetic disorders as well as for exceeding the protein and for chromosome identification. The proteins are useful for cumentiation in specific cells, tissues or serum a

Novel isolated native PRO polypeptide useful for tissue typing, modulating biological activity of cell, as molecular weight markers in protein electrophoresis, for treating enterocolitis, Zollinger-Ellison

SEQ ID ŏ 286; 474pp; English

The invention discloses isolated PRO secreted/transmembrane polypeptides and the nucleic acid encoding them. The polypeptides can be used to raise antibodies that specifically bind to the PRO polypeptide, for linking a bioacctive molecule to a cell expressing a PRO procein and for modulating at least one biological activity of a cell. PRO polypeptides are useful for detecting other PRO polypeptides in a sample and for linking a bioacctive molecule to a cell expressing a PRO polypeptide. The PRO polypeptide antibodies are useful for modulating the biological activity raise ng a

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           CC CDNAs, in chromosome and gene mapping, in the generation of antisense RNA CC and DNA, for preparing PRO polypeptides, for generation of antisense RNA CC animals or knockout animals which are useful in the development and CC screening of therapeutically useful reagents, as probes and for the CC genetic analysis of individuals with genetic disorders as well as for CC recombinantly expressing the protein and for chromosome identification. CC The proteins are useful as molecular marker for protein electrophoresis CC purposes, as therapeutic agents, for screening compounds to identify CC those that mimic the PRO polypeptide (agonists) or prevent the effect of CC the PRO polypeptide (antagonists). The polymuclectides and proteins are useful for tissue typing. PRO antibodies are useful for communohistochemical staining and/or assay of sample fluids. Anti-PRO CC immunohistochemical staining and/or assay of sample fluids. Anti-PRO CC expression in specific cells, tissues or serum and for affinity CC expression in specific cells, tissues or serum and for affinity CC expression in specific cells, tissues or serum and for replacing a CC defective gene. The sequence presented is a PCR primer which was used to amplify a PRO polynucleotide of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Query Match

In particular, these are useful for detecting or treating cardiac insufficiency disorders, wounds, cancerous tumours, retinal disorders or injuries (e.g. loss of sight due to retinitis pigmentosum), obesity, diabetes, hyperinsulinaemia, or bone or cartilage disorders (e.g. sports injuries or arthritis) in mammals. PRO polypeptides and their portions affect the expression of genes which have a role in cell death. The polypucleotides are useful in molecular biology including uses as hybridisation probes are useful in molecular biology including uses as hybridisation probes of the collar biology including uses as hybridisation probes are useful in solate the full-length PRO CDNA or to isolate other than the collar biology including uses as hybridisation probes are useful in solate the full-length PRO CDNA or to isolate other than the collar biology including uses as hybridisation probes are useful the collar biology including uses as hybridisation probes are useful the collar biology including uses as hybridisation probes are useful the collar biology including uses as hybridisation probes are useful the collar biology including uses as hybridisation probes are useful the collar biology including uses as hybridisation probes are useful the collar biology including uses as hybridisation probes are useful the collar biology including uses as hybridisation probes are useful in the collar biology including uses as hybridisation probes are useful in the collar biology including uses as hybridisation probes are useful in the collar biology including uses as hybridisation probes are useful in the collar biology including uses as hybridisation probes are useful in the collar biology including uses as hybridisation probes are useful in the collar biology in th
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 proliferation of endothelial cells, modulating the proliferation of stimulated T-lymphocytes, enhancing the survival or proliferation of
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      of a cell expressing PRO polypeptides. The PRO polypeptides or polymuclectides are useful as pharmaceuticals, diagnostics, biosensors bioreactors. These are useful for stimulating hypertrophy of neonatal heart, inhibiting vascular endothelial growth factor (VEGF)-stimulated
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Human secreted/transmembrane protein, #53, PCR primer #1.

disease, ulceration, Novel isolated native enterocolitis, on, Alzheimer's PRO polypeptide useful for treating Parkinson's s, Zollinger-Ellison syndrome gastrointestinal s disease, amyotrophic lateral sclerosis, Usher

Example 42; SEQ ID NO 286; 487pp; English.

The invention discloses isolated PRO secreted/transmembrane polypeptides CC and the nucleic acid encoding them. The polypeptides can be used to raise CC antibodies that specifically bind to the PRO polypeptide, for linking a bioactive molecule to a cell expressing a PRO protein and for modulating CC at least one biological activity of a cell. PRO polypeptides are useful for detecting other PRO polypeptides in a sample and for linking a CC bioactive molecule to a cell expressing a PRO polypeptide. The PRO CC polypeptide antibodies are useful for modulating the biological activity of a cell expressing PRO polypeptides. The PRO polypeptides or CC polypeptides are useful for modulating the biological activity of a cell expressing PRO polypeptides. The PRO polypeptides or CC polypectides are useful for stimulating the biological activity of a cell expressing PRO polypeptides. The PRO polypeptides or CC polypectides are useful for stimulating the proliferation of neoctable in the proliferation of neoctable in the proliferation of cc proliferation of collections or cod photoreceptor cells, inducing c-fos in endothelial cc ells, modulating the proliferation and/or receils, modulating cross in endothelial cc ells, modulating cross in endothelial collecting or treating cardiac insufficiency disorders, wounds, cancerous tumours, retinal disorders or injuries (e.g. loss of sight due to hypoinsulinaemia, or bone or cartilage disorders (e.g. sports injuries or arthritis) in mammals. PRO polypeptides and their nortions affort the arthritis in mammals. PRO polypeptides and their portions affect the expression of genes which have a role in cell death. The polymucleotides are useful in molecular biology including uses as hybridisation probes for CDNA library to isolate the full-length PRO cDNA or to isolate other CDNAs, in chromosome and gene mapping, in the generation of antisense RNA and DNA, for preparing PRO polypeptides, for generating transgenic animals or knockout animals which are useful in the development and screening of therapeutically useful reagents, as probes and for the genetic analysis of individuals with genetic disorders as well as for recombinantly expressing the protein and content and the proteins are useful as molecular marker for protein electrophoresis purposes, as therapeutic agents, for screening compounds to identify those that mimic the PRO polypeptide (agonists) or prevent the effect of

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                useful for tissue typing. PRO antibodies are useful for immunohistochemical staining and/or assay of sample fluids. Anti-PRO antibodies are useful in diagnostic assays for PRO e.g. detecting its expression in specific cells, tissues or serum and for affinity purification of PRO from recombinant cell culture or natural sources. The PRO genes may also be used in gene therapy, particularly for replacing a defective gene. The sequence presented is a PCR primer which was used to amplify a PRO polynucleotide of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Human; PCR; primer; ss; PRO; secreted; transmembrane; therapeutic; tissue typing; immunohistochemical staining; gene therapy; neonatal heart; vascular endothelial growth factor; VBGF; proliferation; endothelial cell; stimulated T-lymphocyte; retinal neuron; rod photoreceptor cell; c-fos; glucose; PFA; chondrocyte; cardiac insufficiency disorder; wound; cancer; tumour; retinal disorder; retinitis pigmentosum; obesity; diabete, hyperinsulinaemia; bone disorder; cartilage disorder; sport injury; arthritis; cardiant; vulnerary; cytostatic; ophthalmological;

Novel isolated native PRO polypeptide useful for tissue typing, modulating biological activity of cell, as molecular weight markers in protein electrophoresis, for treating enterocolitis, Zollinger-Ellison

Example 42; SEQ ID NO 286; 472pp; English

Coplymotheotides are useful as pharmaceuticals, diagnostics, biosensors or cobjuncteotides are useful for stimulated; diagnostics, biosensors or combaration inhibiting vascular emotabelial growth factor (VEGP) stimulated containing the proliferation of emotabelial cells, modulating the proliferation of colls, inducing cross in emotabelial cells, modulating the proliferation of cells, inducing cross in emotabelial cells, inducing cross in emotable cells, cells, individues cells, individues early proteins affect the cexpression of genes which are useful in the generation of antisense RNA cells, in chromosome and gene mapping, in the generating transgenic cells, individuals with genetic disorders as well as for combinantly expressing the protein and for chromosome identification. The proteins are useful as molecular marker for protein electrophoresis cueful cells, the protein and for chromosome identification. The proteins are useful in the development and cell cells, tissues or serum and for attentify these that mimic the PRO polypeptide (agonists) or prevent the effect of cells, tissues or serum and for attinity or cephacing a cell cells, tissues or serum and for attinity for replacing a cell cells, tissues or serum and for attinity for replacing a cellscation of protein and cell cells are culturally for replacing a cellscation of the The invention account in the molypeptides can be used and the nucleic acid encoding them. The polypeptides can be used antibodies that specifically bind to the PRO polypeptide, for linking a bioactive molecule to a cell expressing a PRO protein and for modulating at least one biological activity of a cell. PRO polypeptides are useful for detecting other PRO polypeptides in a sample and for linking a bioactive molecule to a cell expressing a PRO polypeptide. The PRO polypeptide antibodies are useful for modulating the biological activity of a cell expressing PRO polypeptides. The PRO polypeptides or cell expressing PRO polypeptides. The PRO polypeptides or bioacnatell systems are useful as pharmaceuticals, diagnostics, biosensors or the nuclei discloses isolated PRO O secreted/transmembrane polypeptides
The polypeptides can be used to raise
o the PRO polypeptide, for linking a
sing a PRO protein and for modulating

CC Salmo salar SNPs, Oreochromis niloticus SNPs or Atlantic halibut SNPs;
(c) (i), or its complement under highly stringent hybridisation conditions.
(c) (i) or its complement under highly stringent hybridisation conditions.
(c) Also described: (1) an isolated oligonucleotide (II) comprising at least (I) contiguous nucleotides of a nucleotide sequence of S. salar SNPs, O. niloticus sNPs, O. niloticus sicrosatellites, Atlantic halibut SNPs, Cod (I) polymorphic sites and seabass polymorphic sites, artheir complement; (2) (2) primer pair (III) suitable for use in PCR, comprising two (II) capable (I) conjunctions SNPs, O. niloticus sicrosatellites, Atlantic halibut SNPs, Cod (I) conjunction of fish sample comprising providing a parentage genotype and, O. (I) conjunction of fish sample comprising providing a parentage genotype database (I) comprising a collection of candidate parent genotype, where each of the candidate parent genotype and one of the candidate parent genotype database, where each of the candidate parent genotype detabase to the origin of the sample such as family salmonidae, S. salar, Tilapia, O. niloticus, CC afish sample such as family salmonidae, S. salar, Tilapia, O. niloticus, CC involves contacting the sample containing nucleic acid molecule comprising SNP in a sample, which ore or more (II) which is derived from on incleoticus super and molecule comprising and polymorphic comprising a microsatellite, O. niloticus super and microsatellite, O. niloticus super and identifying nucleic acid molecule comprising a polymorphic comprising and identifying nucleic acid molecule comprising a microsatellite acquance in sample, which hat hybridises to (II) (II) is useful for detecting nucleic acid that hybridises to (II) (III) is useful for detecting nucleic acid that hybridises or eababase polymorphic sites, and identifying a nucleic acid that hybridises or eababase polymorphic sites, and identifying nucleic acid that hybridises to (II) (III) is useful for detecting nucleic acid that hybridises to (II) (I
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  The present invention describes an isolated nucleic acid (I) consingle nucleotide polymorphism (SNP) chosen from: (i) a nucleic Salmo salar SNPs, Oreochromis niloticus SNPs or Atlantic halibut
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Novel isolated nucleic acid molecule comprising single nucleotide polymorphism associated with fish, useful for forming PCR primers which are used for detecting single nucleotide polymorphisms in fish nucleic
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Claim 6;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              18-JAN-2002; 2002US-0349950P

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              र्
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Matches
The invention relates to short interfering nucleic acids (siNA) which downregulate expression of the human c-fos gene by RNA interference. The siNAs may or may not comprise ribonucleotides and may be double or single stranded. They further comprise sense and antisense regions, or alternatively are assembled from a sense oligonucleotide and an antisense coligonucleotide. Specifically, the siNAs include short interfering RNA (siRNA), double-stranded RNA, micro-RNA (miRNA) and short hairpin RNA (shRNA). The siNAs can be unmodified or chemically modified, can contain deoxyribonucleotides, and can be chemically synthesised, expressed from a vector or enzymatically synthesised. The invention also relates to kits for the in vitro or in vivo delivery of siNA; conjugates and/or complexes of siNA; and vectors that express siNA. The siNAs are used to modulate expression of the c-fos gene in cells, tissue explants or organisms (e.g., by ex vivo gene therapy), or in grafts and transplants for the
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                20-FBB-2002;

They may be used for treating central nervous system lesions and injuries (e.g., Alzheimer's disease, Parkinson's disease, philepsy, dementia or amyotrophic lateral sclerosis); various cancers; other proliferative diseases (e.g., restenosis and polycystic kidney disease); inflammatory and/or allergic diseases; viral infections (including HIV infection); autoimmune diseases; viral infections (including HIV infection); for drug screening, diagnosis, therapeutic target identification and validation, genetic engineering, pharmacogenomics, studying gene function, and gene mapping (e.g., of single nucleotide polymorphisms). The present sequence represents the lower strand of a human c-fosterorical decimals.
New short interfering nucleic acid downregulates expression of the c-fos gene useful for treatment and diagnosis of diseases, e.g. cancer and inflammation.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  vasotropic; nootropic; antiparkinsonian; neuroprotective; cytostatic;

Example 3; SEQ ID NO 88; 145pp; English
```

CC alternatively are assembled from a sense oligonucleotide and an antisense coligonucleotide. Specifically, the sinks include short interfering RNA CC (shRNA). The siNAs amodified or chemically modified, can contain CC (shRNA). The siNAs can be unmodified or chemically synthesised, contain CC vector or enzymatically synthesised. The invention also relates to kits CC for the in vitro or in vitvo delivery of siNA; conjugates and/or complexes CC of siNA; and vectors that express siNA. The siNAs are used to modulate CC (e.g., by ex vivo gene therapy), or in grafts and transplants for the CC entral nervous system lesions and injuries (e.g., lateral sclerosis); various cancers; other proliferative CC diseases (e.g., restenosis and polycystic kidney disease); inflammatory CC diseases (e.g., restenosis and polycystic kidney disease); inflammatory CC diseases (e.g., restenosis and polycystic kidney disease); inflammatory CC diseases; and transplant rejections (including HIV infection); CC autoimmure diseases; viral infections (including HIV infection); CC dididation, genetic engineering, pharmacogenomics, studying gene CC function, and gene mapping (e.g., of single nucleotide polymorphisms). CC targeted double-stranded siNA, which is identical to the c-fos transcript transcript constraints. Sequence 19 BP; 2 A; 5 C; 8 G; 0 T; 4 U; 0 Other; target sequence. siNAs may or may not comprise ribonucleotides and may be down stranded. They further comprise sense and antisense regions. The invention expression of relates to short interfering nucleic acids (siNA) which expression of the human c-fos gene by RNA interference. The may not comprise ribonucleotides and may be double or single

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     S
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             that downregulates expression of the SCD (stearoyl-CoA desaturase) gene
CC by RNA interference. Also described: (1) modulating expression of SCD
CG enes in cells, tissue explants or organisms by introduction of siNA; (2)
CC kits for in vitro or in vivo delivery of siNA; (3) conjugates and/or
CC complexes of siNA; and (4) vectors that express siNA. SCD inhibiting
CC siNAs have anorectic, antidiabetic, antiarteriosclerotic, cytostatic and
CC virucide activities. The siNAs can be used to modulate expression of SCD
CC genes, in cells, tissue explants or organisms, e.g. for treating obesity;
CC diabetes (types I and II); atherosclerosis; cancer and viral infections.
CC They can also be used for drug screening; diagnosis; target
CC diabetes (types I and II); atherosclerosis; cancer and viral infections.
CC They can also be used for drug screening; diagnosis; target
CC diabetes (types I and II); atherosclerosis; cancer and viral infections.
CC They can also be used for drug screening; diagnosis; target
CC studying gene function and gene mapping (e.g. of single-nucleotide
CC polymorphisms). The present sequence represents an SCD siNA, which is
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Query Match

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    S
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     The present invention describes a short interfering nucleic acid (siNA) CC that downregulates expression of the SCD (stearcyl-CoA desaturase) gene CC by RNA interference. Also described: (1) modulating expression of SCD CC genes in cells, tissue explants or organisms by introduction of siNA; (2) chits for in vitro or in vivo delivery of siNA; (3) conjugates and/or CC complexes of siNA; and (4) vectors that express siNA. SCD inhibiting CC siNAs have anorectic, antidiabetic, antiarteriosclerotic, cytostatic and virucide activities. The siNAs can be used to modulate expression of SCD CC genes, in cells, tissue explants or organisms, e.g. for treating obesity; CC diabetes (types I and II); atherosclerosis; cancer and viral infections. CC They can also be used for drug screening; diagnosis; target cidentification and validation; genetic engineering; pharmacogenomics; studying gene function and gene mapping (e.g. of single-nucleotide colymorphisms). The present sequence represents an SCD siNA, which is used in the exemplification of the present invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Query Match

cells, modulating glucose or FFA uptake, inducing c-fost in endothelial cells, modulating glucose or FFA uptake, inducing yroliferation and/or redifferentiation of chondrocytes. In particular, these are useful for cetering or treating cardiac insufficiency disorders, wounds, cancerous tumours, retinal disorders or injuries (e.g. loss of sight due to cretinitis pigmentosum), obseity, diabetes, hyperinsulinaemia, or bone or cartilage disorders (e.g. sports injuries or hypoinsulinaemia, or bone or cartilage disorders (e.g. sports injuries or arthritis) in mammals. PRO polypeptides and their portions affect the expression of genes which have a role in cell death. The polymucleotides are useful in molecular biology including uses as hybridiastion probes company, in chromosome and gene mapping, in the generation of antisense RNA cand DNA, for preparing PRO polypeptides, for generating transgenic comminate or knockout animals which are useful in the development and screening of therapeutically useful respents disorders as well as for recombinantly expressing the protein and for chromosome identification. The proteins are useful as molecular marker for proteins electrophoresis purposes, as therapeutic agents, for screening compounds to identify the proteins are useful as molecular marker for proteins electrophoresis cuseful for tissue typing. PRO antibodies are useful for effect of expression in specific cells, tissues or serum and for affinity capies may also be used in gene therapy, particularly for replacing a defective gene may also be used in gene therapy, particularly which was used to defective gene. The sequence presented is a PCR primer which was used to
                   The invention discloses isolated PRO secreted/transmembrane polypeptides CC and the nucleic acid encoding them. The polypeptides can be used to raise CC antibodies that specifically bind to the PRO polypeptide, for linking a CC bioactive molecule to a cell expressing a PRO protein and for modulating at least one biological activity of a cell. PRO polypeptides are useful CC for detecting other PRO polypeptides in a sample and for linking a CC bioactive molecule to a cell expressing a PRO polypeptide. The PRO CC polypeptide antibodies are useful for modulating the biological activity of a cell expressing a PRO polypeptide or CC of a cell expressing PRO polypeptides. The PRO CC polypeptide antibodies are useful for modulating the biological activity CC of a cell expressing PRO polypeptides. The PRO polypeptides or CC polynucleotides are useful for stimulating hypertrophy of meonatal colling activity of the proliferation of continulated T-lymphocytes, enhancing the survival or proliferation of cretinal neurons or rod photoreceptor cells, inducing c-fos in endothelial continuation of the proliferation of the continuation of the province of the continuation of the cells, inducing c-fos in endothelial continuation of the continuation of the cells inducing c-fos in endothelial continuation continuation continuation and/or recommendations.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Ashkenazi A, Botsucar.

                           The present invention describes a double-stranded short interfering nucleic acid (siNA) that downregulates expression of the vascular endothelial growth factor receptor (VEGFR) gene. Also described: (1) a siNA that downregulates the VEGF gene; (2) kits for in vitro or in vivo delivery of siNA; (3) conjugates and/or complexes of siNA; (4) vectors that express siNA; and (5) single-stranded siNA with similar properties
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       short interfering nucleic acid; siNA; downregulation; vascular endothelial growth factor receptor; VEGFR; antiangiogenic; cytostatic; antidabetic; ophthalmological; antiarthritic; antipsoriatic; nephrotropic; gynaecological; angiogenesis-associated condition; cancer;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         20-FEB-2003;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        arthritis;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               double-stranded short interfering nucleic acid;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Sequence
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 amplify a PRO polynucleotide of the invention.

The siNA are useful for modulating the expression of VEGFR genes. The siNA are potentially useful for treating a wide range of angiogenesis-associated conditions, particularly cancers, diabetic retinopathy, macular degeneration, neovascular glaucoma, arthritis, psoriasis, endometriosis, angiofibroma, and polycystic kidney disease. The siNA may also be useful for diagnosis, drug screening, target identification and validation, genetic engineering, studying gene function, and also for gene mapping (e.g. of single-nucleotide polymorphisms). The present sequence is used in the exemplification of the present invention.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              ophthalmological, antiarthritic, antipsoriatic, nephrotropic and gynaecological activities. The siNA are useful for modulating the expression of VEGFR genes. The siNA are potentially useful for treating a wide range of angiogenesis-associated conditions, particularly cancers, diabetic retinopathy, macular degeneration, neovascular glaucoma, arthritis, psoriasis, endometriosis, angiofibroma, and polycystic kidney disease. The siNA may also be useful for diagnosis, drug screening, target identification and validation, genetic engineering, studying gene function, and also for gene mapping (e.g. of single-nucleotide polymorphisms). The present sequence is used in the exemplification of the present invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       The present invention describes a double-stranded short interfering nucleic acid (siNA) that downregulates expression of the vascular endothelial growth factor receptor (VEGFR) gene. Also described: (1) a siNA that downregulates the VEGF gene; (2) kits for in vitro or in vivo delivery of siNA; (3) conjugates and/or complexes of siNA; (4) vectors that express siNA; and (5) single-stranded siNA with similar properties. The siNAs have antiangiogenic, cytostatic, antidiabetic, cytostatic, antidiabetic,
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  ss; siNA; human; BCL2; short interfering nucleic acid; RNA interference; cytostatic; immunosuppressive; virucide; anti-HIV; cancer; autoimmune disease; viral infection; HIV.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Human BCL2 siNA lower sequence
                                  New short interfering nucleic acid, useful e.g. for treatment and diagnosis of cancer or autoimmune disease, downregulates expression

                                                                                                          The invention relates to a novel short interfering nucleic acid (siNA) that downregulates expression of the BCL2 gene by RNA interference. A siNA of the invention has cytostatic, immunosuppressive, virucide, and anti-HIV activity. The siNA are useful for modulation (inhibition) of expression or activity of BCL2 by RNA interference. siNA are used to modulate expression of BCL2 genes, in cells, tissue explants or organisms, e.g. for treating cancer, autoimmune diseases and viral infections (including by HIV) but also for drug screening, diagnosis, target identification and validation, genetic engineering, pharmacogenomics, studying gene function and gene mapping (e.g. of single nucleotide polymorphisms). The sequences shown in ADF49273-ADF50143 represent siNA of the invention.

                                                                                            This invention relates to novel isolated polynucleotides that confer resistance against late blight caused by the comycete pathogen Phytophthora infestans, which threatens both tomato and potato crops. Specifically, it refers to a gene cluster (namely Rpi-blb) that encodes leucine-rich repeat (LRR) proteins identified in Solanum bulbocastanum, and which cause disease resistance to bacteria, fungi, nematodes etc. These R genes, namely Rpi-blb, RGC1-blb, RGC3-blb and RGC4-blb, can be described as plant growth regulants. They are useful in providing resistance to Phytophthora infestans, especially in Solanum tuberosum (potato) plants to protect against comycete infection or to demonstrate disease susceptibility. Resistance conferred by transformation of cexisting potato and tomato cultivars with the gene, a procedure that is onlyonucleotide sequence is a PCR primer used as a marker for This oligonucleotide sequence is a PCR primer used as a marker for
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Matches 16;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Query Match

The siNA are useful for modulation (inhibition) of expression or activity of BCL2 by RNA interference. siNA are used to modulate expression of BCL2 genes, in cells, tissue explants or organisms, e.g. for treating cancer, autoimmune diseases and viral infections (including by HIV) but also for drug screening, diagnosis, target identification and validation, genetic engineering, pharmacogenomics, studying gene function and gene mapping (e.g. of single nucleotide polymorphisms). The sequences shown in ADF49273-ADF50143 represent siNA of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             New resistance gene conferring resistance against an comycete useful for producing plants, especially potatoes and tomatoes, against comycete pathogens such as Phytophthora infestans.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              08-FEB-2002; 2002EP-00075565

The invention relates to short interfering nucleic acids (siNA) which downregulate expression of the human insulin-like growth factor 1 receptor (IGF-IR) gene by RNA interference. The siNAs may or may not comprise ribonuclectides and may be double or single stranded. They further comprise sense and antisense regions, or alternatively are assembled from a sense oligonucleotide and an antisense oligonucleotide. Specifically, the siNAs include short interfering RNA (siRNA), double-stranded RNA, micro-RNA (miRNA) and short hairpin RNA (siRNA). The siNAs can be unmodified or chemically modified, can contain deoxyribonucleotides, and can be chemically synthesised, expressed from a vector or enzymatically synthesised. The invention also relates to kits for the in vitro or in vivo delivery of siNA; conjugates and/or complexes of siNA; and vectors that express siNA. The siNAs are used to modulate expression of the IGF-IR gene in cells, tissue explants or organisms
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   RNA interference; short interfering nucleic acid; siNA; short interfering RNA; siRNA; double-stranded RNA; micro-RNA; miRNA; short hairpin RNA; shRNA; expression modulation; gene therapy; drug screening; diagnosis; therapeutic target identification; pharmacogenomics; gene function analysis; gene mapping; cancer; proliferative disease; restenceis; polycystic kidney disease; inflammatory disease; restenceis; polycystic kidney disease; transplant rejection; cytostatic; vasotropic; nephrotropic; antiinflammatory; antiallergic; immunosuppressive; human; insulin-like growth factor 1 receptor; IGF-1R; ss.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Example 3;

They may be used for treating cancer and other proliferative diseases (e.g., restenosis and polycystic kidney disease), inflammatory and/or allergic diseases, autoimmune diseases and transplant rejection. The siNAs are also useful for drug screening, diagnosis, therapeutic target identification and validation, genetic engineering, pharmacogenomics, studying gene function, and gene mapping (e.g., of single nucleotide polymorphisms). The present sequence

downregulate expression of The invention relates to short

the

interfering human insuli

fering nucleic acids insulin-like growth

(siNA) factor

The invention relates to a method of promoting or suppressing cell proliferation by increasing or decreasing paternally expressed gene 10 (PEG10) protein levels, and suppressing or promoting cell death by increasing or decreasing PEG10 protein levels in the cell. The method is useful for promoting or suppressing cell proliferation or cell death.

. The method is cell death.

Promoting or suppressing cell proliferation by increasing or decreasing paternally expressed gene 10 (PEG10) protein levels.

2003-572666/54.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            片
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Ş
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          deoxyribonucles, and can be chemically synthesised, expressed from a vector or enzymatically synthesised. The invention also relates to kits for the in vitro or in vivo delivery of siNA; conjugates and/or complexes of siNA; and vectors that express siNA. The siNAs are used to modulate expression of the IGF-1R gene in cells, tissue explants or organisms (e.g., by ex vivo gene therapy), or in grafts and transplants for the treatment of a variety of conditions. They may be used for treating cancer and other proliferative diseases (e.g., restenosis and polycystic kidney diseases, inflammatory and/or allergic diseases, autoimmune diseases and transplant rejection. The siNAs are also useful for drug screening, diagnosis, therapeutic target identification and validation, genetic engineering, pharmacogenomics, studying gene function, and gene mapping (e.g., of single nucleotide polymorphisms). The present sequence represents the upper strand of a human IGF-IR-targeted double-stranded siNA, which is identical to the IGF-IR transcript target sequence.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Query Match

The siNAs can be unmodified or chemically modified, can contain
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               receptor (IGF-IR) gene by RNA interference. The siNAs may or may not comprise ribonucleotides and may be double or single stranded. They further comprise sense and antisense regions, or alternatively are assembled from a sense oligonucleotide and an antisense oligonucleotide.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 21-SEP-2001; 2001JP-00290248
